## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Doan et al., U.S. Patent 5,346,587.

Doan et al. shows the invention substantially as claimed including forming isolation blocks 52 which are separated by a thin gate oxide 51 which is formed by thermal oxidation; depositing a polysilicon layer 34 to a thickness wherein the lowest most portion of the upper surface of the polysilicon is above the upper surface of the field oxide; forming a silicide layer 35; planarizing the polysilicon layer; forming a photoresist mask 36 over a portion of the polysilicon layer overlying at least a portion of the substrate not covered by the field oxide; and etching the polysilicon and silicide layers to form a planarized gate electrode (see Figures 3-5 and column 2, line 15 - column 3, line 5). Chemical-mechanical polishing is a well known planarization process. Doan et al. lacks anticipation of showing a stack etch which etches both the gate electrode and gate oxide material and sidewall spacer formation alongside the patterned gate electrode. The examiner takes official notice that the above limitations are well known in the art and thus prima facie obvious in view of

the Doan et al. reference in order to, for instance, form spacers to reduce the parasitic capacitance of the device.

## Conclusion

3. This is a continuation of applicant's earlier Application No. 08/645,003. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, THIS ACTION IS MADE FINAL even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
